Me

04 May 2001, Catania

Address

Via Genova, 7 - Augusta
Siracusa, Italia - 96011

Profile

Passionate about technology, robotics, and automation, I led my team to win national competitions such as the First Lego League and RoboCup.

After graduating with top marks in Computer Science and Telecommunications, I immediately began my professional career in the IT field, developing both technical and leadership skills. Known for my determination, teamwork, and commitment to growth, I aim to contribute to innovative projects where technology empowers people.

Work Experience

2020 - Present
C2T
Catania - Remote

AtenaLux

Developed a Flutter-based application for a medical research startup led by a healthcare researcher. The project, currently in the experimental phase, aims to support cognitive well-being and preventive care through light and sound therapy techniques designed for Alzheimer's prevention research. The app communicates via WebSocket with an externally manufactured smart lamp, managing therapy sessions and allowing users to schedule, record, and play programmed light patterns or voice notes through an integrated in-app calendar. Featuring a modern and minimal design, the app offers an intuitive user experience and streamlined management of therapeutic sessions.

Caronte - Innovazione Industriale

Web application designed to interconnect industrial machines and provide a comprehensive overview of entire production flows. Featuring a clean and minimal design, it has been integrated and is currently used by several Italian companies to optimize industrial processes and production efficiency. Actively contributed as UI/UX Designer and Lead Frontend Developer. Built with Next.js, Node.js, and SQL Server, the system is fully dynamic and customizable, allowing complete configuration of the UI and machine data tables through a dedicated backoffice. Each machine has dedicated sections offering real-time insights into power consumption, active production orders, and operational errors or alerts.

Plastic - ING

Web application developed to streamline data collection and analysis related to the consumption of plastic materials, through dynamic questionnaires aimed at industrial companies. Designed to simplify production workflows and enhance polymer management, enabling the assessment of material usage over different time periods. Built with Next.js, REST APIs, and integration with a relational SQL Server database.

Work Experience

Continued

2020 - Present
C2T
Catania - Remote

Desmotec - iOS

I took part in the project as Project Manager and Lead Developer, overseeing both the technical direction and delivery. Developed a cross-platform mobile application optimized for smartphone use, integrating all features from the tablet app while adding BLE communication with a dedicated hardware board and the flexibility to operate without additional components. The project achieved significant success and rapid adoption. The app has been deployed to official stores and is currently in production use.

Desmotec - PWA

Actively contributed as UI/UX Designer and Lead Developer to the development of a Progressive Web App built with Flutter for storing and managing exercise summary reports. The application has been developed, deployed, and is currently in production use.

Desmotec - Performance Training App

Long-term project (over two years), in production for a considerable time and still under active maintenance. Developed an Android application entirely built with Flutter, powered by REST APIs in Node.js and a MySQL database. Communicates via USB with a dedicated hardware board, collecting real-time training data and displaying it through custom live charts. Widely used in Italy and abroad, including by professional football team trainers.

Promoline - Import Your Card

Contributed to the project as UI/UX Designer and Lead Developer. Developed a cross-platform application capable of extracting data through OCR systems and integrating with REST APIs in Node.js and SuiteCRM. The product was fully prototyped, developed, deployed, and is currently in production use.

Partitalia - CMS

Participated in the development of a fully customized CMS built with React. The project required close collaboration and coordination among several developers, resulting in a robust and scalable platform. This teamwork experience strengthened professional synergy and contributed to the success of subsequent projects.

2018 - 2020
Mars Brothers
Augusta

Bartender / Barista

Worked during summer seasons in the family business as a bartender and barista. The experience taught me the value of commitment, responsibility, and teamwork, while strengthening my communication and customer interaction skills.

Education

2024 Coderful	Coderful 0 - Frontend Edition Attended the first edition of Coderful, a conference focused on frontend development and modern web technologies.
2022 Cyber Security Catania - Remote	Cyber Security – Internal Corporate Events Participated in company-led sessions on cybersecurity, focused on best practices for protecting systems and corporate data. The knowledge gained helped enhance the security of developed products and internal services.
2021 – Present University of Catania	University of Catania – Computer Engineering Began a Bachelor's Degree in Computer Engineering in 2021 while working full-time. Currently continuing studies in software development, embedded systems, and computer architectures. Balancing work and study has strengthened my discipline, time management, and organizational skills
2015 - 2020 Arangio Ruiz Augusta	A. Ruiz - Computer Science and Telecommunications Graduated with top marks (100/100). Developed strong technical foundations along with soft skills in teamwork and leadership. As leader of the school's robotics team, guided the group to victory in regional and national competitions (First Lego League, RoboCup), bringing recognition to the institute. This experience strengthened my collaboration, problem-solving, and project management abilities.
